There were only a few differences from Fable 2. These were initially part of Fable 2's gameflow script that happened to be plain text. ;)

This tracker is primarily for experience tracking and specialFX. The playerdeathtracker.lua is vastly different to Fable 2 because of the kingship and renown changes.

I've replaced the original script using the xlive patch modding method. But I can't seem to find any difference in the game. What exactly does this mod do?

There are no changes. I rewrote it for others to change.

I read through it and I'm trying to come up with any useful ways to mod it. I suppose you might be able to give yourself a little more XP (but, honestly, you get so stinkin' much XP in this game that

it's already very easy). On that note, you might try to give less XP...

But the most fun (I guess) mod I can imagine right now would be to figure out a way to mod:

Toggle spoiler

```
local xp_type = message:GetExtraDataAsNumber()

if xp_type == EExperienceType.EXPERIENCE_STRENGTH then
    Debug.CreateEntityAt("FX_PotionEffect_Experience_Strength", "FX",
QuestManager.HeroEntity:GetPosition())
elseif xp_type == EExperienceType.EXPERIENCE_SKILL then
    Debug.CreateEntityAt("FX_PotionEffect_Experience_Skill", "FX",
QuestManager.HeroEntity:GetPosition())
elseif xp_type == EExperienceType.EXPERIENCE_WILL then
    Debug.CreateEntityAt("FX_PotionEffect_Experience_Will", "FX",
QuestManager.HeroEntity:GetPosition())
end
```

perhaps by swapping Debug.CreateEntityAt("FX\_PotionEffect\_Experience\_Strength", "FX", QuestManager.HeroEntity:GetPosition()) , etc., with a fun animation sequence (similar to Keshire's vestigial F2 code). For "Strength", I might use "Thumbsup", "Flex", and/or "BloodLustRoar".
