This method allows you to make changes to the script without relaunching the game

Setup:
use Catspaw's GFWL emu
Put DLC folder to Fable 3 game directory
create folders: data\scripts\MyMod
create text files MyScript01.lua and MyScript02.lua inside "data\scripts\MyMod" directory
open dir.manifest (inside "data" directory) with notepad and add:
scripts\MyMod\MyScript01.lua
scripts\MyMod\MyScript02.lua

MyScript01.lua is executed once per 60 frames (one second on 60fps rendering)
MyScript02.lua is executed only when screen is fading

now make little test
start game
alt+tab
write in MyScript01.lua
Debug.SetUseFreeCamera(true)
alt+tab to game
now you can fly around
then alt+tab to notepad and replace TRUE to FALSE
Debug.SetUseFreeCamera(false)
alt+tab to game, camera should go back to normal :)

For modders:
I used DEMO001 quest code, so if you used it too, you need to replaced it

I've written a nifty little script into myScript02

Toggle spoiler
while ((Inventory.GetNumberOfItemsOfType(GetLocalHero(), 'ObjectInventoryPotionHealth')) <
100)
 do
 Inventory.AddItemOfType(GetLocalHero(), 'ObjectInventoryPotionHealth')

```
end

while ((Inventory.GetNumberOfItemsOfType(GetLocalHero(), 'ObjectInventoryPotionSlowTime')) <
100)
 do
 Inventory.AddItemOfType(GetLocalHero(), 'ObjectInventoryPotionSlowTime')
end

while ((Inventory.GetNumberOfItemsOfType(GetLocalHero(), 'ObjectInventoryPotionDeadRising'))
< 100)
 do
 Inventory.AddItemOfType(GetLocalHero(), 'ObjectInventoryPotionDeadRising')
end
```

It tops you up to 100 potions of each type every time the screen fades to black... (since I'm so
filthy rich, it's only an annoyance to have to go buy potions... never mind that I'm virtually
invincible at this point, anyway...)

Yeah... got tired of the kiddos sending me all over Albion looking for Toy Bows and Porcelain
Dolls... so I added this... I <3 LUA!!!

```
 Toggle spoiler
local fillGiftItems = {
 'ObjectInventoryGiftChessboard',
 'ObjectInventoryGiftChocolates',
 'ObjectInventoryGiftFlowers',
 'ObjectInventoryGiftGoblet',
 'ObjectInventoryGiftHandMirror',
 'ObjectInventoryGiftJewellery',
 'ObjectInventoryGiftPerfume',
 'ObjectInventoryGiftFruitBowlSilver',
 'ObjectInventoryGiftRing',
 'ObjectInventoryGiftToyBow',
 'ObjectInventoryGiftToyGun',
 'ObjectInventoryGiftToyHorse',
 'ObjectInventoryGiftToyPorcelainDoll',
 'ObjectInventoryGiftToyRagDoll',
 'ObjectInventoryGiftToySword',
 'ObjectInventoryGiftToyTeddyBear',
 'ObjectInventoryGiftGemAmethyst',
 'ObjectInventoryGiftGemDiamond',
 'ObjectInventoryGiftGemEmerald',
```

```
  'ObjectInventoryGiftGemJet',
  'ObjectInventoryGiftGemRuby',
  'ObjectInventoryGiftGemPearl',
  'ObjectInventoryGiftGemTopaz'
}

for key,value in pairs(fillGiftItems) do
 while ((Inventory.GetNumberOfItemsOfType(GetLocalHero(), value)) < 5)
  do
   Inventory.AddItemOfType(GetLocalHero(), value)
 end
end
```

For some reason I had to change the lines

RunScript("scripts\\MyMod\\MyScript02.lua")
RunScript("scripts\\MyMod\\MyScript01.lua")

to

RunScript("MyMod/MyScript01.lua")
RunScript("MyMod/MyScript02.lua")

Before this started working.
I'm not sure if it's something unique to my installation, but I thought I would share in case it helps
anyone else.

I spent the last two hours getting this down as I personally didn't feel like hunting for anything. It
gives you all cosmetics, clothing, normal furniture,collectible paintings, weapons, spells, gifts, and
100 potions (Admittedly I stole the code for the gifts and potions from TheGeniusSavant). Wait
until you've at least gotten to be able to use all modes of weapons normally before using it,
otherwise I've heard your game will freeze if you try to enter the road to rule for the first time if you
have all weapons.

In hindsight, I should have put this as MyScript02 as I have multiples of gauntlets in my armory.

What that means for spell weaving is anyone's guess. Other than that, it should have no problems.

On another note, thank you guys so much for keeping this forum up and running with great information as I don't know what I'd do without it for modding this game! Hopefully we can do similar, if not greater stuff with Fable 4 whenever that's released.

Revisiting Fable iii after a long break. I used this script injector with no problems under the Windows 8 o/s. The script injector doesn't seem to work with Win 10 x64 Home (insider build 1501). I did try the syntax change mentioned a few posts before. Is there anything that needs to change to get it working in Win 10 x64?

probably this version of Catspaw's GFWL emu doesn't work on win10
did you try to update it?

I've tried catspaw xlive 15A, 15B, 15C, and 15D.
It's strange, The entries I have in MyScript01.lua are working, where I set wealth to 100 and building condition to "normal" for a village I visit.
However, MyScript02.lua isn't working where I used to run scripts to open Mistpeak Demon door and other things.
Example for Mistpeak demon door..

```
if not Layers.IsLayerActive("QD030_MistpeakValleyDemonDoorTransition") then
 QuestTracker.SetAsCompleted(GetLocalHero(), "QD030_MistpeakValleyDemonDoor")
 Layers.ActivateLayer("QD030_MistpeakValleyDemonDoorTransition")
end
```

The above won't work in either of the .lua files.

so 15D is the latest version, don't tracked it for a long time..
I have win7, can't help you with win10
there is high probability that something with the game paths (or rights)
did you try different installation folder? (if you install Fable to Program Files ofc)

ok...figured out the problem. I had modded levels.bnk to where I removed the intro movies on
game startup. In doing so, it prevented any scripting from working in the injector, such as scripts I
had mentioned in prior post. I reset levels.bnk to original and then scripting in the injector was
working again.

I can't get the scipt injector file :<
it redirects me to a blank page with address
ww.fable3mod.net/forums/index.php?t=getfile&id=89&
Does someone have a copy please?

I am brand new to modding games so I'm not sure if I understood where the files are supposed to be placed. I set it up GameFiles/data/scripts/MyMod/then the myscripts 01 and 02.lua. Its not working for me so I definitely did something wrong, I have the GFWL emu and I copy pasted the script injector into the GameFiles folder. Where am I supposed to place the lua folders so that they work for me?

Take out any spaces in your lua filenames so that they look like this:
MyScript01.lua
MyScript02.lua
They're in the right place, though.
Hang on. Where did your game come from that it has a "Gamefiles" folder? Mine doesn't. (Probably unimportant)

You probably missed this, but you're going to have to edit dir.manifest to add these two lines
scripts\MyMod\MyScript01.lua
scripts\MyMod\MyScript02.lua
Put them right at the end of the file and save it.

dir.manifest is found in the /data/ folder. It's actually just a plain text file that tells the game what files to load and where they are.

Does your version come with the DLC?
If it does (and it honestly should), there should be a "DLC" folder somewhere. Put the Script Injector in there. Not loose files, in a folder that the game will load; something like "10_ScriptInjector".
Also, the gfwl emu can go in there as well.

Inside, the folders should contain a content.xbx file and a Content folder which should have three more files in it.
The xlive.ini and xlive.dll files should go in the base folder (Which would be your Gamefiles folder).
