I've uploaded TodX's chunkspy alteration for disassembling KoreVM lua scripts, and well as a handy batch script that shows how to use it. Alternatively you can drag and drop compiled lua scripts onto the batch file to get the text output too.

I've also uploaded the lua source files with the added KoreVM opcodes. It's nowhere near usable as I was just adding them for when I eventually got around to trying to write a decompiler.

Wow, it's been a while since I've poked at Fable 3.

On a whim I've started updating a newer version of Chunkspy to handle KoreVM lua instructions. I'll also be updating the output so it's more readable and intuitive.

cool!

I may come back to modding F3 too, if you made GDBEditor add new items :)

it's really one of the most annoying thing, when you need to find what you can safely replace on map..

I'll take a look at it. May end up writing the thing from scratch.
